

Candidiasis and Amebiasis - task for the period 06 - 10.04.2020

Dear Students!

The file contains the task that must be completed by 04/10/2020. 23 hours 55 minutes

The completed tasks should be sent to the department's e-mail **microbiology@nuph.edu.ua**

the subject of the letter should indicate your faculty, course, group, your name and your teacher's name.

We wish you success in your task!

Question 1

The child's mucous membrane of the cheeks, palate and tongue were found white dots that sometimes merge, forming a kind of cheesy film. Under the film was revealed hyperemic mucosa with smooth surface. Such manifestations characterize candidiasis.

1. Name the pathogen; describe its morphology and virulence factors; specify the source of the pathogen and mechanisms of contracting the infection.
2. Describe the scheme of laboratory diagnosis of infection. Expand the contents of each method.
3. What are the immunological and chemotherapeutic drugs for the treatment of infection.

Question 2

Describe Amebiasis.

1. Name the pathogen; describe its morphology and virulence factors; specify the source of the pathogen and mechanisms of contracting the infection.
2. Describe the scheme of laboratory diagnosis of infection. Expand the contents of each method.
3. What are the immunological and chemotherapeutic drugs for the treatment of infection?
